

## **MILLS THAT PRODUCE NEWSPRINT CONTAINING POSTCONSUMER RECOVERED FIBER**

This list of manufacturers and suppliers of newsprint containing postconsumer recovered fiber was prepared to facilitate implementation of the U.S. Environmental Protection Agency's (EPA) Comprehensive Procurement Guideline (CPG) and to assist customers interested in purchasing and using products containing recovered materials. Some manufacturers provided the names and locations of regional or local suppliers. A list of definitions is included.

Each listing is based on information provided by the manufacturer. Product information was not verified, and no guarantee, expressed or implied, is made as to the accuracy or completeness of the information provided. Inclusion in this listing does not represent an endorsement by EPA.

For information on or copies of the CPG, contact EPA's RCRA Hotline at 800 424-9346.

## **DEFINITIONS**

### **FIBER**

A thread-like body or filament many times longer than its diameter. Paper pulps are composed of cellulose fibers, usually of vegetable origin, such as woods and grasses.

### **GROUNDWOOD PAPER**

Any paper that is made from a furnish containing a large percentage of mechanical pulp.

### **INTEGRATED MILL**

A paper mill that manufactures its own pulp.

### **NEWSPRINT**

A grade of paper made especially for use in the printing of newspapers. Newsprint is the most inexpensive paper available that will withstand printing and contains mostly mechanical (groundwood) pulp.

### **MECHANICAL (OR GROUNDWOOD) PULP**

Pulp produced by reducing pulpwood logs and chips into their fiber components by the use of mechanical energy, via grinding stones, refiners, etc.

### **POSTCONSUMER FIBER**

Paper, paperboard, and fibrous wastes from retail stores, office buildings, homes, and so forth, after they have passed through their end-usage as a consumer item; and all paper, paperboard, and fibrous wastes that enter and are collected from municipal solid waste.

### **RECOVERED FIBER**

All postconsumer fiber and manufacturing wastes, such as dry paper and paperboard, generated after completion of the papermaking process; and repulped finished paper and paperboard from obsolete inventories of paper and paperboard manufacturers, merchants, wholesalers, dealers, printers, converters, or others.
